Bodger Seeds Ltd. proudly presents:

COSMOS RADIANCE

... for release in 1948. Winner of the highest award in the '48 All America trials, Radiance introduces two entirely new colors in Sensation Cosmos: Striking deep rose (27/1) and rich crimson (824/2), in the first bicolor Cosmos ever to be developed. Destined for immediate popularity in the nation's gardens, it is the first big postwar novelty.

Additional outstanding Bodger introductions for

LARKSPUR GIANT IMPERIAL DEEP CARMINE KING IMPROVED

A larger, more beautiful Carmine King, which will hold its color under the most trying conditions. Newest and largest of the favorite Giant Imperial type, it will certainly become the standard carmine in this class.

ASTER QUEEN OF THE MARKET BALLET QUEEN

Good news for Aster growers! This Queen is very definitely wilt resistant, and a fascinating shade of deep salmon rose that attracts attention immediately. It bears 3 1/2" flowers generously, on plants useful for both bedding and cutting.

EXCELLENCE MEANS SATISFACTION AND SATISFACTION MEANS BUSINESS

●
In the All America Selections that margin of excellence has brought Bodger Seeds Ltd. more **Gold Medals** than any other flower seed grower in the world.

DIANTHUS HEDDENSIS FINEST MIXED

The 1946 Award Winner Westwood Beauty is now offered in the full range of Dianthus colors. Well formed 2" flowers on long, 16" stems, fine for cutting. An entirely new tetraploid variety combining the large open flowers of Heddewigi with the rugged growth and long-stemmed habit of Chinensis, and more tolerant of extreme temperatures than either of its parents.

CROP 1947

THE CHINA ASTER is one of the loveliest flowers to be found in any garden, and it has been developed and cherished for hundreds of years as the most colorful of the late summer annuals. Provided that one may be assured of healthy plants, few flowers can challenge its popularity. Twenty years ago however, Aster Wilt, one of the primary Aster diseases, became so widespread as to threaten the very existence of the Aster family itself, and nullify the patient work that produced the many beautiful varieties seen today. How this disease was mastered, and how the Aster was returned to its preeminent place in home and commercial growing makes a fascinating story:

To begin with: Wilt is caused by the fungus *Fusarium conglomerans* var. *Callistephi*, which lives in the soil. It may be spread by tools, water, Aster seed—anything that comes in contact with a diseased plant, and it persists almost indefinitely. It may be avoided if the grower plants land which has never grown Asters before, but this course is usually impractical. There is at present no known drug or chemical which will destroy the fungus. How, then, is Aster wilt conquered?

The process developed by Bodger Seeds Ltd. in the pioneer work which established the firm as the largest successful growers of Aster seed in the world is relatively simple: Much like vaccination among human beings, it consists of exposing test plants to a case of Aster wilt. The plants which develop anti-toxins, or resistance, survive, and supply seed for the next generation of test plants. The number of wilted plants is of little importance provided that strong wilt resistance is obtained, and so the test plants get an extremely heavy dose of fungus in the Pest House, a twenty-acre farm in charge of Bodger experts, devoted solely to wilt research work, and expressly infected with as much wilt as possible.

The tendency to wilt-resistance can be inherited, and the Aster plants grown from the seed produced the previous year are quite resistant—but the process does not stop there. These descendants of the first test plants are again grown in the Pest House, so that only those lines which have a strong tendency to wilt-resistance may survive to give seed for bulk plantings. By means of this technique—the survival of the fittest—Bodger's original strains of wilt-resistant Asters were developed.

It must be borne in mind that in all cases it is *resistance*, not *immunity*, which is developed. The tendency toward resistance is an inherited characteristic which will "breed out" in several generations if the plants are not "vaccinated," or put through the Pest House cycle again within a reasonable time. Again, the *Fusarium* is quite unstable, mutating to produce fungus which will overcome the resistance

developed against the original strain. For this reason, all Bodger wilt-resistant varieties are continually being conditioned in the Pest House, and each year's stock seed comes directly from a two-generation exposure to wilt of a virulence not found in ordinary planting soil. Your Bodger Aster seed is just one generation away from the Pest House, and it is highly resistant. Even a few generations of increase in non- or lightly-infected soil will produce seed of decidedly less resistance.

Resistance is an hereditary characteristic, and so are plant and flower types. As may be seen above, Bodger wilt-resistant Asters were developed from non-resistant, *Commercial* varieties, quite true to type—not as a result of cross breeding between commercial types and inferior, if resistant, strains. Bodger wilt-resistant Asters are identical with the regular commercial varieties except that they contain the additional factor of wilt-resistance. Because we take pride in maintaining this accuracy of type, some varieties of Asters are not at present offered as "wilt-resistant." At the present stage of development, these strains cannot be made resistant without sacrificing essential qualities of type, and it is not recommended that they be used where considerable wilt has been observed. Developing wilt-resistant Asters is relatively easy, whereas combining resistance with the characteristics of well-established types is not. There will always be a variation in the tendency to resistance according to similarity to the most resistant type, so that resistance is always expressed as a percentage, a high value of which is required before a type can be classified as "wilt-resistant."

The war against wilt is a continual one, complicated by the varying character of the wilt strain and bad weather breaks which sometimes wipe out a long chain of selection work. Among commercial growers, Bodger Seeds Ltd. is the pioneer in wilt research, and the only firm actively carrying on a continual wilt workshop. Trained personnel with many years' experience are your assurance that your Bodger wilt-resistant Aster seed is of high quality, true to type, and as wilt-resistant as we can make it. An extensive development program is devoted to new and exceptional varieties, all of which will be thoroughly tested for wilt-resistance before release. Because of Bodger's program of research work, wilt no longer poses a problem to the careful grower who makes sure he has resistant stock. Aster culture is again a practical thing even in land heavily infested with wilt, and the Aster once more can claim the title of Queen of Garden Flowers.

ELECTRO #455G ASTER EARLY GIANT W. R.
PEACH BLOSSOM

Asters

LARGE FLOWERED, HEAVY STEMMED, SPECIAL FLORIST VARIETIES

EARLY GIANT WILT RESISTANT f (Bodger)

The finest large flowered, heavy stemmed wilt-resistant Aster yet developed. Flowers are of the large Giants of California type, while the plants are less tall, about 1 1/2' in height, with strong heavy stems. This class is early blooming, coming into flower four to six weeks earlier than the Giants of California, that is during early to mid August. An exceptional new class.

DELPHINIUM PACIFIC GIANTS pf (Vetterle and Reinelt)

Remarkable new strain developed by Vetterle and Reinelt on the Pacific Coast. Flowers extremely large and well formed, 2½" to 3½" in diameter, symmetrically spaced on well-balanced spikes of thin woody stems, practically 100 per cent double. This strain is comparatively mildew resistant. Seed we have to offer is of our own growing produced from the originator's stock seed.

LARKSPUR GIANT IMPERIAL of

Tall, upright, compact, basal branching in habit, the Giant Imperials have superseded all other types of Larkspurs for florists' and general garden use. The delphinium like spikes of double flowers, carried on stems 4'-5' long, are compactly placed on the upright growing plants, requiring only about one-half the space needed for the old stock flowered type of Larkspur.

ELECTRO #482G MARIGOLD GIGANTEA FULL DOUBLE ORANGE

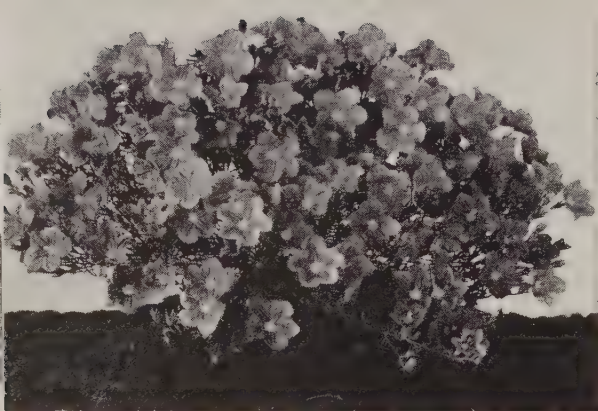

Fifty-seven years ago, there came from England a wise and kindly man who was capable of great dreams, and of the hard, back-breaking work that makes great dreams come true. He established himself and his family on five acres of land in Santa Paula, California, and settled down to till the land and support his children. Life was not easy during his first years in his adopted country, but neither was he a man to let hardship dull his keen wit or his optimistic nature. His enterprise prospered and he became a respected man in the seed trade; soon his sons entered his business and carried it on. His picture is on these pages: John Bodger, founder of the firm which bears his name. The Bodger

organization is today a realization of the great aspirations of its founder. The original five acres have been increased to several hundred times that number, spread over the broad reaches of California as he dreamed they would be. The company's center of operations, moved in time to Gardena and later to El Monte, California, now include many buildings, all in the traditional Spanish architecture of Southern California. The firm does an international business, and its exports are one of the primary reasons why California flower seeds have become the standard of the world. The picture above of a great field of flowers in full bloom is a living memorial to the faith and constant work of John Bodger. It is a tribute to the freedom of opportunity that is the strength of this nation, and a credit to the present-day members of the Bodger organization. John Bodger would have liked this picture; it is printed here in appreciation of his courageous spirit.

SPRING FLOWERING SPENCER *af*

Remarkable new intermediate season type, exhibiting strong heat resistance in combination with vigorous growth, extremely long, stout stems, and a heavy crop of flowers over a long season of production. Adapted to both outdoor and greenhouse growing.

STANDARDIZED ELECTRO PRICING GUIDE

HOW TO USE: Place guide over electro desired, so corner marked "X" coincides with upper left-hand corner of electro. One rectangle of guide will fit or slightly exceed area of electro. Letter in lower right-hand corner of rectangle indicates standardized size and thus price. Electros falling in between standard sizes are classed with next larger size.

R. H. S. HORTICULTURAL COLOR CHART: In this and other sections of this list we have added to the regular descriptions of a variety some numbers in italics. These refer to color blocks in the Color Chart which many of our customers have secured either from us (as U.S. distributors) or the Royal Horticultural Society direct. To see the precise color of a flower so described, turn to the page indicated and mask the proper block with the black mat provided. For example, Larkspur Gt. Imp. Los Angeles Improved is described as 623/1. Turn to page 623 and mask the block 623/1, which is the first tint of the full hue 623. We are gradually completing color registrations of all listed varieties in which exact color descriptions are vital. By means of this Chart, the most complete ever compiled, exact color descriptions may be sent by letter or wire, without recourse to paints, ambiguous names or other makeshifts. Applicable to other trades and uses also, in which color standardization is desirable.

Obtainable from us, in full sets (2 volumes) only.....\$12.00/set

PRECISION ACCURATE AS A CARPENTER'S PLANE, THE LANDPLANE BRINGS THE SURFACE OF THE LAND LEVEL FOR PERFECT IRRIGATION.

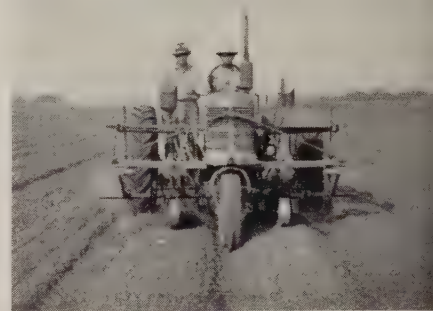

AFTER THE SCRAPER HAS DONE THE HEAVY WORK.

Talk about farming

PLOWMAN MAKES A DIE-STRAIGHT FURROW WITH GANG PLOW AND BIG DIESEL TRACTOR.

PLANTING IS A PRECISE SCIENCE. HERE, ZINNIA SEED IS PUT IN, USING THE LATEST OF MANY IMPROVEMENTS IN MULTIPLE-ROW PLANTERS.

Much has been said and written about the Mechanical Revolution in agriculture that took place during the War Years. With labor exceedingly hard to find, farmers all over the United States were challenged to replace men with machines—to invent or adapt machinery that would do many farm jobs that had always been assigned to hand labor. The food production figures for the War Years show how successfully American farmers met that challenge. What many observers outside of the Middle West did not realize, however, was that mechanization of farm operations in certain industries was proven long before the War. In the flower seed industry, for example, Bodger Seeds Ltd. had long been adapting standard machines to specialized uses, and thus had a backlog of experience on which to draw when developing radically new machines to do jobs previously practical only with hand labor.

Preparation of the land is work admirably suited to the capabilities of machines of various kinds. Mechanization here dates to before World War I, at which time Bodger Seeds was already standardized on big Diesel tractors such as is shown pulling the gang plow in the picture above. Improvements in the design and flexibility of the smaller gasoline-powered tractor brought it into more and more preparation jobs so that at Bodger Seeds, plows, discs, scrapers, rollers, planters, cultivators, sprayers and so forth have long been machine-operated. Many of these machines had been built or rebuilt in Bodger shops, to suit the unique requirements of flower seed farming.

When war came, Bodger Seeds put its experience and imagination to work developing new machines to meet new needs, which had extended to cover the production of vegetable seeds for war use. Harvesting was the big problem, because of the number of seed varieties grown, with their thousands of shapes, weights, seasons and methods of handling, and it was in harvesting that the most remarkable new designs were engineered just after war was declared:

The "Galloping Goose" is the affectionate name for a basic new farm tool designed and built in its entirety in the Bodger shops. Essentially, it is a self-propelled cutter of unique design, built to cut and place on sheets a wide variety of crops, replacing old-fashioned hand sickle methods. It will also windrow crops on the ground if desired, and work at twice the speed of the usual crew of men. The secret of the Goose is in its "lumber carrier" construction: The power units and controls are mounted high in the air, allowing a clear working space below; because it is no wider than its sickle bar, it can "open up" a field without the usual hand-cut opening swath. The advantages are obvious: It does a better job of cutting, saving more seed, faster than hand labor. After the pilot model was proven, several more Geese were built, each one using improvements dictated by an ever-increasing experience.

The Triangular Windrower is another machine of the same general type, but differing from the Galloping Goose in that it was designed and intended solely as a windrower, and does this specialized job with great efficiency. It carries a swiveled rear-wheel assembly so that it can work in tight spots, and because the engine is in the rear the operator has an unobstructed view of the work ahead. It also is self-propelled so that it need not require a tractor in the rush season, and is again no wider than its sickle bars, so that no hand-cut opening swath need be made.

PLANTING BEDS ARE FORMED AND IRRIGATION DITCHES MADE

The Self-propelled Harvester illustrates what is probably the most sensational advance made in farm machinery during the last six years. Introduced by a national manufacturer of farm machinery, it is the culmination of the slow evolution from the stationary type powered from a separate tractor, and through the self-powered, tractor-drawn units. Like a shortstop fielding a grounder on the baseball diamond, this machine picks up, threshes, and bags flower seed *on the run*, without halting its forward progress. Bodger production men bought one of these machines—originally grain harvesters—and redesigned it, the first such adaption to be made anywhere in the industry. In a test, it exceeded the output of a stationary machine by *more than five to one*. Speed such as this is vital at harvest time, when thousands of acres are involved and the rainy season only a few weeks away. Bodger now has many such self-propelled harvesters—their speed an assurance against delay and heavy loss due to rain, with the resultant shortage of seed to the trade.

The Landplane shines *after* harvest, when the land is being prepared for next year's planting. The reasons for its development are peculiar to Far Western farming: In this region rain is not always enough, nor regular enough, to make maximum yields. Irrigation is the secret of the West's productivity, and scientific irrigation requires perfectly flat land. The Landplane is just what its name implies: It is a giant plane that brings the surface of the land flat as a billiard table, with just the right "drop" for irrigation at a slow, controllable rate—the rate that makes big crops. All Bodger flower seed acreage is under irrigation, and it is the Landplane which does that all-important job of precision leveling unable to obtain in any other way. It is another Bodger "first" among flower seed growers.

Mechanization was, of course, indispensable for production during the war, when cost was of secondary importance. With the return of peace cost again became important, but in the meantime all costs of production had jumped sky-high.

(Continued below)

SELF-PROPELLED HARVESTER IS THOROUGHLY CLEANED WITH COMPRESSED AIR BEFORE SHIFTING TO A DIFFERENT COLOR OF SAME TYPE CROP. CONSCIENTIOUS CARE LIKE THIS PREVENTS MECHANICAL MIXING.

UNIQUE TRACTOR LIFT SOLVES PROBLEM OF HOW TO SHIFT HEAVY CANVASSES USED WITH GALLOPING GOOSE.

ONE OF THE BIG SELF-PROPELLED HARVESTERS AT WORK. BIG MACHINE PICKS UP, THRESHES AND BAGS SEED FROM FIELD ON THE RUN.

TRIANGULAR WINDROWER MOVES FAST; CUTTING FOR THRESHER.

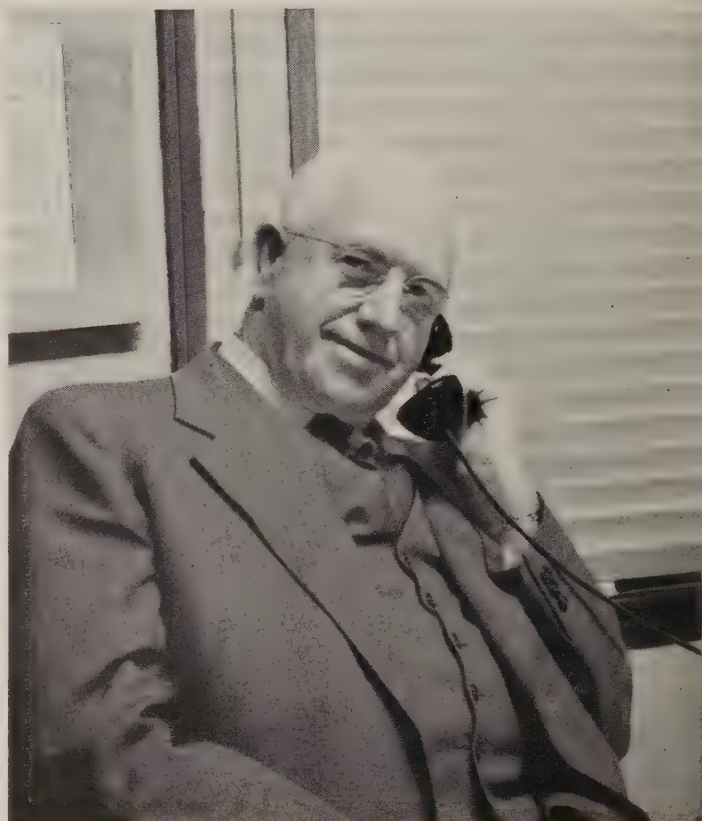

GALLOPING GOOSE IS BASIC NEW FARM TOOL DESIGNED AND BUILT BY BODGER PRODUCTION MEN, GIVEN NATION-WIDE PUBLICITY IN A NATIONAL MAGAZINE RECENTLY. IT CUTS ONTO CANVASSES; POWER UNITS AND CONTROLS MOUNTED HIGH TO GIVE CLEAR WORKING SPACE BELOW.

Labor costs alone are now so high that a return to pre-war methods would mean a tremendous increase in flower seed prices. The "hold the line" price policy in effect since war's end underlines the decision of seed growers to continue with the equipment developed during the war: These techniques, developed to increase production for war, now keep prices from skyrocketing during the reconversion period. Bodger production men, with resourcefulness and foresight, are continuing the development of new methods, new machines, which improve the quality and dependability of the crop and keep production costs within bounds. Mass production has arrived in agriculture, and mechanization is here to stay.

Western Hospitality IS A

Flower growing is a fascinating business, and the great acres of the Western flower seed growers are an irresistible lure to many hundreds of people each June and July, when the crops are at the peak of their bloom, and whole valleys are carpets of color. Both the Lompoc and El Monte offices of Bodger Seeds Ltd. see an almost endless stream of visitors during the late spring and early summer. Many are seedsmen, come to look over the crops with a professional eye, but others are enthusiasts connected with horticulture in various different ways. Work is never too pressing to spare a moment to take visitors through the trial grounds, or around the modern plant at the home office in El Monte. You are welcome, any time and any season. The best time to see Lompoc is in May and June, El Monte in July and August. Chances are you will meet several of the men whose pictures are on these pages; they will do their best to make your visit both pleasant and informative.

J. C. BODGER, PRESIDENT

J.C., third son of the founder, has led the company through the years of early pioneering of Flower Seed production in California. He is at the present very active in streamlining the organization to meet post-war conditions.

HOWARD BODGER, SALES

Son of J. C. Bodger, Howard is the newest Bodger in the firm. He is the junior member in the Sales Department, and also does publicity and publication work.

WM. F. HORRELL, SALES MGR.

Another old-timer in the seed trade, everyone knows Bill Horrell. What the Production Department produces, he sells.

J. E. UNDERHILL (Lompoc)

Another of Scotty's men, Ted does hybridization and selection, and works on new introductions.

DONALD DODDS (Lompoc)

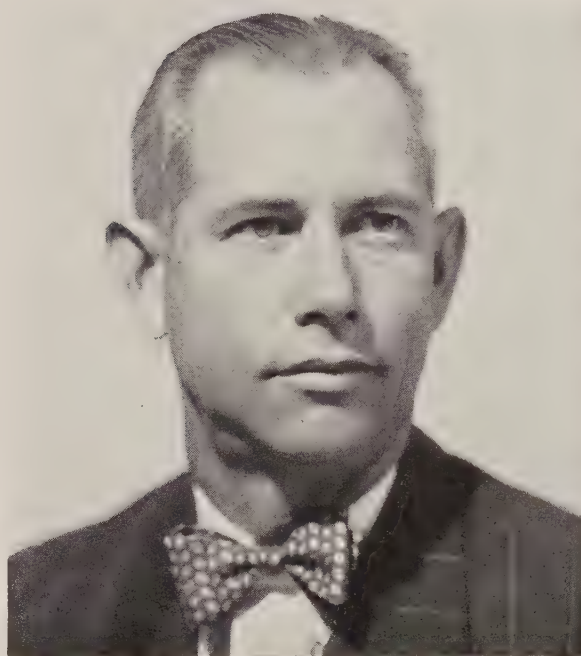

Working under Scotty Sinclair, Don Dodds does selection work and watches the trueness of the stock.

TRADITION AT BODGER SEEDS

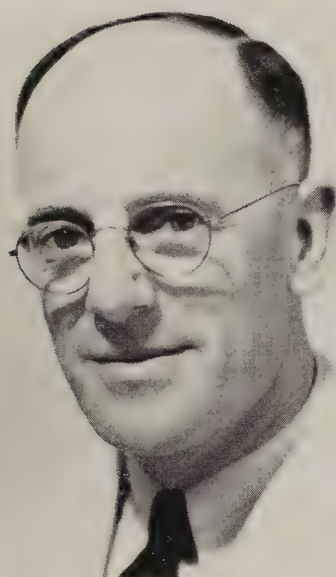

TOM M. BODGER, VICE PRESIDENT

Another son of the founder, Tom Bodger is Production Manager, and responsible for all farming operations, both in El Monte and Lompoc. Production is the cornerstone of any seed business, and his is a key position.

JOHN F. BODGER, VICE PRESIDENT

Son of the late Walter Bodger, whom many in the trade knew well, John F. is invaluable in production as well as financial matters. The remarkable new machines on the previous pages are his brain-children.

IAN SINCLAIR, HYBRIDIST (Lompoc)

Hardly a seedsman who has visited California in the past two decades doesn't know Scotty Sinclair. As Senior Hybridist, he is the man who develops the new novelties that have brought Bodger Seeds so many Gold Medals.

C. M. BODGER, ASST. MGR. (Lompoc)

In charge of production at the Lompoc Branch, Chuck Bodger has a thousand seed varieties to look after. His office rides around with him in his car.

JAMES ALEXANDER, SUPT. (Lompoc)

Responsible for farming operations on all Lompoc ranches, Jim Alexander was born on a farm and carries a lifetime of experience with him in his work.

Service Department

The Bodger Service Department was established fifteen years ago on a non-profit basis to assist our friends and customers in preparing their catalog and advertising. The scope of the department now includes almost all of the graphic arts, the most important of which is photography. Our Photographic Department has recently moved into enlarged quarters and acquired new equipment, so that it is in a position to be of more service than ever before.

PHOTOGRAPHS: We are equipped to supply, at cost price to us, professional-quality glossy prints of (1) all the varieties of which we offer seed, (2) most of the varieties we have listed in recent years, and (3) certain horticultural subjects we do not normally grow; usually in several poses of each subject. These are unexcelled for display, advertising and catalog use. The most popular of these photographs have been made into electros, and our Electro Catalog provides somewhat of a guide to what is available. When in doubt, write us of your requirements and a selection of photographs showing what we can supply will be sent by return mail.

COLOR PHOTOGRAPHS: Through long experience in color work, we have found that hand-colored transparencies are the most satisfactory to discriminating users, and cost no more than existing color processes. Transparencies are regular prints on Translite film, hand colored to precision accuracy. Since they are made from our regular negatives, we can offer transparencies of any subject of which we offer black-and-white photographs. They should be displayed with a light (daylight type) behind the picture to bring out the almost life-like brilliance and beauty. Transparencies are **MADE UP TO ORDER ONLY**, and are chosen from a selection of photographs or the Electro Catalog. Allow, under normal conditions, about ten days for completion of your order.

Color process films (Kodachrome, Ansco Color, etc.) are not generally as satisfactory for horticultural use as are transparencies. We do, however, make limited use of these films and a reasonable assortment of originals in various sizes is available for publicity use.

PRICES: Expanded facilities now enable us to offer our photographs and transparencies in several sizes. 8" x 10" size is contact; all others are enlargements:

SIZE	PHOTOGRAPH	TRANSPARENCY
5" x 7".....	\$ 3.50 (limited selection)
8" x 10".....	\$1.00	5.00
11" x 14".....	1.75	8.50
16" x 20".....	3.25	16.00
Larger sizes.....	.01/sq. in.	.05/sq. in.

ELECTROS: We have available electros for use in printed matter of a great number of the photographs offered above, as well as color nickeltypes of the most popular varieties. Black-and-white: 120 screen; color: 133 screen. (See page 52 for color cuts.) Electros are chosen from our Electro Catalog, from this or past Bodger seed catalogs, or from a selection of photographs, and are **MADE UP TO ORDER ONLY**. Allow, under normal conditions, about ten days for completion of your order.

#557G MARIGOLD DWARF DOUBLE HARMONY HYBRIDS

All Electros are sent out unmounted, unless mounting is specifically requested. There is an additional charge of 20% for mounting. When ordering, please specify preference.

STANDARDIZED ELECTRO PRICING GUIDE: Except in rare instances, electros are made in standard column widths such as $2\frac{1}{2}$ ", $2\frac{3}{4}$ ", $3\frac{1}{4}$ ", etc., with lengths to fit the subject. It is therefore practical to group them by sizes, although a few will be outside. A Standardized Electro Pricing Guide, printed on celluloid, is included with this list and its graph (half-size) is reprinted below to explain the "price by size" system.

HOW TO USE: Place guide over electro desired so that corner marked "X" coincides with upper left-hand corner of electro. One rectangle of the guide will fit or slightly exceed the area of the electro. The letter in the lower right-hand corner of this rectangle will indicate the standardized size of this electro. Electros falling in between standardized sizes are classed with the next largest size. Dimensions of the electro can be read directly from the guide. For example: Electro No. 483, Marigold Dwarf Harmony Hybrids, is $2\frac{3}{4}$ " wide and $3\frac{1}{4}$ " long, and is thus Size F on the Pricing Guide. Electros printed in this catalog have the size letter added to the number, so that No. 483F (for example) indicates both the electro and its size.

PRICES: All electros, color as well as black-and-white, are priced according to size. There is a special rate on the popular small Size A of \$.95 each, providing that 3 or more are ordered at the same time. They may be of three different subjects, if desired. One or two Size A electros take the regular \$1.50 price.

Size	Black-and-White	Full Color
A	\$1.50 (3 or more, .95 ea.)
B	1.75
C	2.00	\$11.00
D	2.25	13.50
E	2.50	16.00
F	2.75	18.00
G	3.00	24.00
H	3.25

These prices go into effect immediately, superseding those effective up to date and those printed in our 1941 Electro Catalog. The 1941 Electro Catalog is still current so far as available selection is concerned, and it may be obtained free of charge simply by writing to Bodger Seeds Ltd.

R. H. S. HORTICULTURAL COLOR CHART: In various sections of this list we have added to the regular descriptions of a variety some numbers in italics. These refer to color blocks in the Color Chart which many of our customers have secured either from us (as U.S. distributors) or the Royal Horticultural Society direct. To see the precise color of a flower so described, turn to the page indicated and mask the proper block with the black mat provided. For example, Larkspur Gt. Imp. Los Angeles Improved is described as 623/1. Turn to page 623 and mask the block 623/1, which is the first tint of the full hue 623. We are gradually completing color registrations of all listed varieties in which exact color descriptions are vital. By means of this Chart, the most complete ever compiled, exact color descriptions may be sent by letter or wire, without recourse to paints, ambiguous names or other makeshifts. Applicable to other trades and uses, also, in which color standardization is desirable. Obtainable from us, in full sets (2 volumes) only—\$12.00/set.

TERMS AND GENERAL CONDITIONS OF DELIVERY

All seeds are quoted F.O.B. El Monte, California, terms 60 days net, less 2% cash 30 days. All invoices payable in U. S. dollars in or by New York or Los Angeles Exchange. All overdue accounts subject to sight draft without further notice.

Bags and containers will be charged at cost and are not returnable. There will be no charge made for bags smaller than the one pound size ($5 \times 7\frac{1}{2}$ inches).

Prices quoted in this list go into effect immediately, superseding all previous quotations. All orders of 4 ounces or over will be charged at the pound rate; all orders under 4 ounces will be charged at the ounce rate.

We reserve the right to change any or all prices in this list without notice.

In case of crop shortages, orders will be filled pro rata only.

Crop failure or any cause beyond our control releases us entirely from delivery.

"We give no warranty, express or implied, as to the productiveness of any seeds or bulbs we sell and we will not be in any way responsible for the crop. Our liability, in all instances, is limited to the purchase price of the seed."

Should fulfillment of any order or contract be prevented or delayed by the act of God, war, blockade, revolution, prohibition of exports or imports, riots, strikes, lockouts, fire, loss and/or detention at sea or any other contingency beyond our control, we shall not be responsible for any loss and/or damage thereby.
